

What Can the United States learn from Iceland and Switzerland to increase their modern renewables

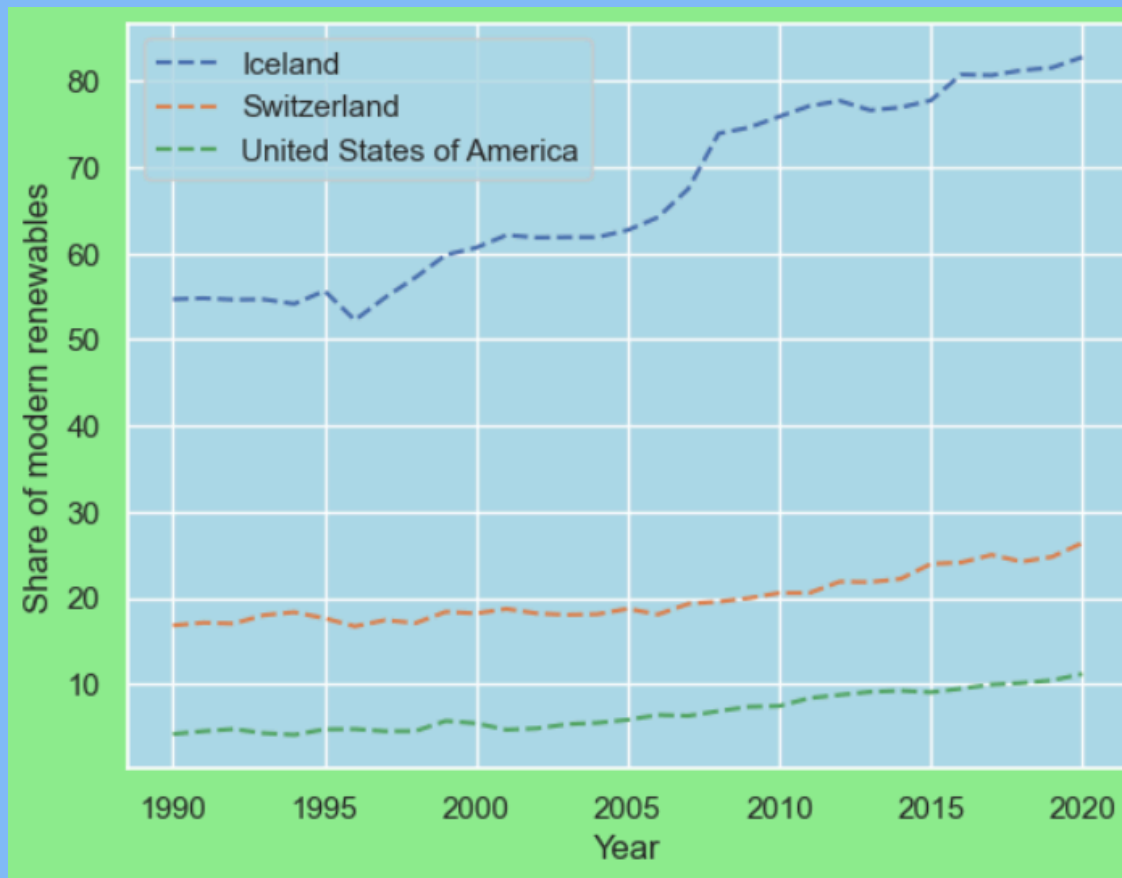

Chart made with python from data from:
<https://www.iea.org/data-and-statistics/data-product/sdg7-database#share-of-modern-renewables>

- The USA has many areas of geothermal energy sources especially in the western states just like Iceland
- Iceland has an advantage for wind power due to areas of low population density and the USA can emulate this by building wind power in the Great Plains
- Switzerland's government highly prioritizes modern renewables and the USA can work on having their government focus more on developing modern renewables
- Switzerland is at the front of many technological advancements in the modern renewables space and the USA has a lot of talent in the technological space and can migrate some of that talent into the modern renewables space.
